SQL Fundamentals for Data

Pre-Course Setup

There are two items that need to be downloaded for this course:

- SQLiteStudio
- SQLite database files

SQLiteStudio can be downloaded with the links below. Choose the correct version for your OS (Windows, Mac or Linux) and it will prompt you to download SQLiteStudio.

MAC OS X

Windows

Linux 32-bit

Linux 64-bit

After the download, **copy** the contents to a location your choice (or Applications for Mac OS X). You must copy the items out of the archive file for it to work, and wherever you paste it is where the SQLite application will reside. Inside this folder, you should see a `SQLiteStudio` or `SQLiteStudio.exe` with a gray cylinder icon. This launches SQLiteStudio (Figure 1)

Figure 1 - The SQLiteStudio folder containing the application

The database files can be retrieved from GitHub here. Click the `Clone or Download` button, and then `Download ZIP` to download all the databases in a zipped folder (Figure 2).

Figure 2 - Saving the database files

Open the downloaded file and copy the contents to a folder of your choice. You may want to reserve this folder just for SQLite database files in this course.
